

# THE ECO<sup>3</sup>™

## “How does the product work?”

The ECO<sup>3</sup>™ utilizes a Load Adaptive Cycle Rate Analyzer to optimize the efficiency of the compressor run cycle.

This provides reduced compressor cycle times, system energy savings and increased compressor service life.

Info: Control prediction based on statistics is called “Fuzzy Logic” and is almost always more efficient.

Reduced Runtime

- Analyzes run data
- Predicts future requirement
- Prediction based on statistics
